INVENTION CONVENTION 2003
Student Invention Disclosure Form

Title of the Invention: Door Opener

Problem Statement: When I'm in bed, I get up for a drink a lot. Since it's dark, and my door is black, I walk right into it.

Description of Solution: My invention's handle is made from a squeeze mop. Its gripper is made from two toilet tank flappers. When you squeeze the mop against a door, the flaps work like suction cups. Twist to open.

Diagram of the Invention:

The diagram shows a side view of a door handle assembly. It consists of a long horizontal bar with a rectangular "handle slider" in the middle. To the right of the slider is a cylindrical "roller" with two "flanges" extending from its side. An arrow points to the right from the roller. A separate inset diagram shows a top-down view of the roller and flanges, with the word "roller" written below it.
